S.C. WRIGHT CONSTRUCTION, INC.

Your comprehensive forensic construction source

S.C. Wright Construction, Inc. is the nation's leading forensic construction firm, providing expert services for developers, contractors, subcontractors, insurance companies and attorneys throughout the United States.

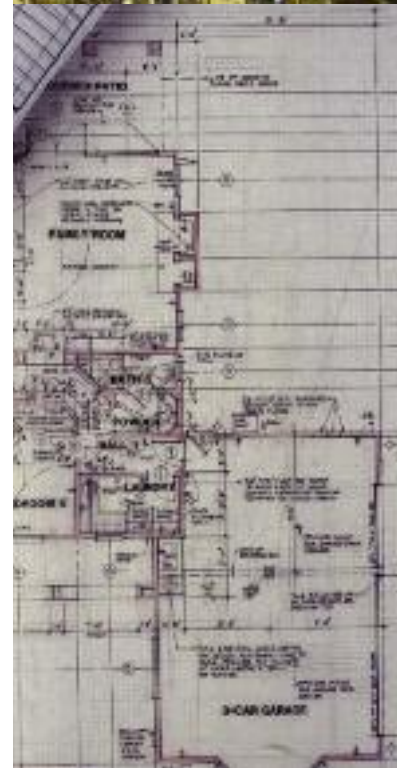

We offer a complete spectrum of forensic construction services for our clients— pre-construction analysis, quality assurance services during construction, complete forensic consulting and expert witness testimony, destructive testing, industry training programs, construction, reconstruction, repair and remediation.

While other forensic consultants claim to offer similar services, the fact is only S.C. Wright Construction, Inc. offers this comprehensive package. As an active, experienced construction firm for two decades, we enhance our forensic consulting services with the capacity to complete the necessary repair and reconstruction projects. This ability distinguishes us from every other company in the forensic construction industry and provides our clients credible representation in the legal arena.

In a business where so much is riding on the countless details of each project, it pays to utilize the services of a company that is active in every facet of forensic construction.

S.C. Wright Construction, Inc. **Expertise. Performance. Results.**

“S.C. Wright Construction, Inc. has proven time and again that there is no substitute for practical hands-on experience. By integrating their forensic services with active construction, they have elevated their company to the top of the forensic consulting industry.”

FORENSIC CONSULTING

Forensic Consulting Services

S.C. Wright forensic consulting services are regarded as the gold standard in the forensic construction industry. Our consultants enhance their forensic expertise with active construction experience, resulting in the highest caliber results....and a measurable advantage for our clients.

As an active construction company S.C. Wright can enter into a construction contract to test, repair and reconstruct projects, resulting in credible 'real world' cost estimates and evaluations in a court of law.

Services

S.C. Wright offers a complete range of forensic consulting services to ensure a comprehensive analysis of construction-related issues and the best possible outcome in a litigation dispute.

When a project requires a specialized approach to analysis, S.C. Wright offers the services of a full range of experts, including architects, structural engineers, electrical engineers, civil engineers, mechanical engineers, concrete materials experts, environmental experts, and others.

All of our forensic consulting services are available throughout the United States.

Our Services Include:

- Third Party Quality Assurance During Construction
- Third Party Construction Document Peer Review
- Construction Auditing
- Online Web Service Data Storage
- Critical Path Analysis
- Repair and Reconstruction Cost Estimates and Evaluation
- New Construction Cost Estimates and Evaluation
- Full Destructive Testing
- On-Site Inspections
- Damage Evaluation
- Maintenance Program Evaluation
- Coordination as Team Leader of Forensic Experts' Assignments
- Full-Service Post-Construction Audits
- ADA Compliance Inspections
- Construction-Related Personal Injury Cases
- OSHA/Life Safety Evaluations

Clientele

S.C.Wright Construction, Inc. provides forensic construction services nationwide for attorneys, insurance carriers, developers, general contractors and subcontractors.

Experience

S.C. Wright forensic specialists have a combined 180 years of experience in all facets of forensic construction. Our performance record includes construction-related personal injury cases, commercial construction defect claims, residential construction defect claims, owner-contractor agreement disputes, developer suits, class action claims and other construction-related issues.

STRENGTH IN NUMBERS

40

S.C. Wright consultants have testified in Superior Court trials over forty times as expert witnesses.

300

S.C. Wright consultants have been deposed over 300 times.

5000

S.C. Wright Construction, Inc. has been hired for over five thousand construction defect cases.

Expertise.
Performance.
Results.

TRAINING SERVICES

S.C. Wright Construction, Inc. has developed a complete range of training courses, focusing on current construction and trade-related topics.

These courses provide the depth of information every general contractor should have access to, while enhancing the productivity of risk managers, insurance claims adjusters and attorneys.

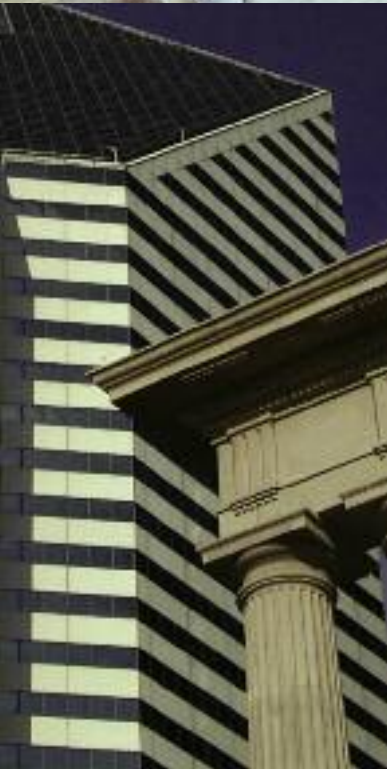

The classes are designed to minimize construction defects and defect claims by providing the tools required to gain more control over more facets of the construction process.

Types of Courses Offered:

- Water Intrusion Management Plan and the Builder
- Residential Construction Sequencing and Water Intrusion Management
- Mold Construction Defects
- Residential Construction Sequencing
- Prevention of Water Intrusion Issues for Roof and Sheet Metal Contractors

For a complete list of available training courses, refer to the Training Courses insert sheet in this packet.

S.C. Wright Construction, Inc. is currently certified in multiple states as a provider of courses that qualify for continuing education credits, including the Texas State Department of Insurance.

CONSTRUCTION ASSURANCE TECHNOLOGY, LLC

A Pro-Active Approach to Building

In the building industry quality control is everything. Without it, the work suffers, defects occur and litigation ensues.

We developed a unique program known as Construction Assurance Technology that gives builders and developers more control in the pre-construction and construction phases of their projects.

The results? Minimized defects. A higher quality product. Reduced potential for future litigation.

For more information refer to the Construction Assurance Technology insert in this packet.

- Prevention of Water Intrusion Issues for Roof & Sheet Metal Contractors

S.C. Wright Construction, Inc. **Expertise. Performance. Results.**

Construction Assurance Technology, LLC

ProActive
Risk Management

CONSTRUCTION ASSURANCE TECHNOLOGY, LLC

ProActive Risk Management

S.C. Wright has established a new company—Construction Assurance Technology—that offers a pro-active approach for builders and developers.

The services featured in this technologically-advanced program are concentrated on the primary sources of defect litigation, including vertical construction and moisture intrusion.

By gaining total control over specific phases of the building process prior to and during construction, builders and developers can maximize their quality control and minimize defects.

Pre-Construction Peer Review

Our experts provide a detailed analysis of construction plans with an emphasis on eliminating areas of potential exposure incorporated into the plans. In this analysis they identify potential construction sequencing problems that may occur, based on the presence and absence of certain details. Quality is designed in....defects are designed out.

Major Component Testing

Our professional inspectors provide detailed on-site investigation of construction component failures which could result in construction defect claims. This involves testing of all major construction components, including below-grade waterproofing, vapor emissions testing, balcony deck exterior cladding, fenestration and roofing systems. The testing serves to immediately identify any component failures that can be corrected cost-effectively before the next construction phase is implemented.

All testing is digitally photographed and stored online. All reports are submitted in writing—a rarity in this specialized field.

“This pro-active approach is the future of developing—

Custom Inspection Protocols

Construction Assurance Technology is unique in the industry because we create custom inspection protocols for each individual project. These protocols are based on an analysis of the plans prior to construction by our professional industry experts for each project.

Our competitors, however, take a standard checklist template and recycle it for all projects, whether it applies or not.

Once custom protocols are created, the construction team can pro-actively concentrate on high-risk problematic areas as the project is being constructed—mitigating potential defects and resulting litigation.

Data Storage and Retrieval

Our secured on-line, web-based data storage system provides for 24-hour access to test results, digital images and inspection reports.

This system allows for data to be sorted by trade, subcontractor, plan type, project and phase.

Customized Training Certificate Program

We meet with key builder and developer personnel to establish customized training and certification programs for site superintendents, project managers, subcontractors and other personnel.

Our training programs address construction deficiencies that often lead to defect claims and litigation.

Training topics include:

- 6 Most common defects
- Moisture intrusion
- Mold issues
- Construction sequencing
- Other defect-related areas

— correcting defects before they happen.”
